

CLEARED FOR THE ROLE

10 workwear checks every aviation operation should make:

1 TASK BASED SPECIFICATION

Are garments specified by task, not just department? Is there consistency across locations, teams and contractors where consistency is needed?

2 ROLE PROTECTION

Is the required protection clearly understood for each role?

3 BRANDED HI VIS

Are high visibility garments still compliant after branding?

4 DISTANCE IDENTIFICATION

Can people be identified quickly at a distance?

5 SAFE MOVEMENT

Do garments allow safe movement around aircraft, baggage systems, vehicles and equipment?

6 FOOTWEAR CHOICE

Are footwear choices appropriate for long shifts on hard, uneven or exposed surfaces?

7 WEATHER COMPATIBILITY

Are weather garments compatible with the PPE worn underneath?

8 INCLUSIVE FIT

Are sizes and fits inclusive enough to support the whole workforce?

9 WEARER CONSULTATION

Are wearers consulted before large scale changes are made?

10 VISIBILITY & SPEND CONTROL

Can managers see what has been ordered, what is being used and where uniform spend is going?

CONTROLLING THE DETAIL - ENSURES GREATER VISIBILITY & SAFETY

⚠ WORKWEAR CAN LOOK COMPLIANT ⚠
THE REAL QUESTION IS WHETHER IT IS CLEARED FOR THE ROLE

RISKS ARE NOT ALWAYS OBVIOUS - REDUCE THE BLIND SPOTS

SUPPLIER ASSURANCE MATTERS

Choose PPE and workwear from a supplier that can advise on the correct standard for the role and

application. Standards should be checked against the role, current risks and intended use.

KEY STANDARDS REFERENCE

- ▶ BS EN ISO 20345 Safety footwear
- ▶ BS EN 388 Protective gloves - against mechanical risk

- ▶ BS EN 397 2025 Safety helmets
- ▶ BS EN ISO 13688 Protective clothing - general requirements

- ▶ BS EN ISO 20471 High-visibility clothing
- ▶ BS EN 342 Protective clothing - cold protection
